Smooth Application

Turning visa refusals into approvals for Nigeria's outbound travelers.

United Kingdom • Canada • Schengen Area • South Africa

Seyi Afeni, Founder • Sope Tubi, CTO

smoothapplication.github.io/smooth-application

Getting a visa shouldn't feel like a lottery

Most refusals aren't about being unqualified — they're about the application failing to clearly show it. With no free, reliable source of guidance, applicants either pay unlicensed “agents” of unknown quality, or go it alone and pay the price when it comes back refused.

A refusal isn't the end — it's a repeat customer. Most reapply, and need it right the next time.

2024 visa refusal rates — Nigerian applicants

Sources: Businessday NG / Leadership NG (UK, 2024); Nairametrics (Schengen, 2024); IRCC-derived country analyses (Canada visitor visa).

A large, recurring, high-stakes market

4.09M

Nigerian visa applications to the UK alone, 2005
– Q1 2026 (1.34M refused)

111,000

Schengen applications from Nigeria in 2024 —
the highest year on record

€4.5M

Lost by Nigerian applicants to non-refundable
Schengen fees in a single year

Add Canada and South Africa — both growing corridors for Nigerian travelers — and the addressable population of people preparing a visitor-visa application every year runs well into the hundreds of thousands.

A free, private co-pilot for the whole process

Country-specific document checklist

UK, Canada, Schengen and South Africa — built from official government guidance.

In-browser passport scan

OCR reads your passport for you. Nothing is ever uploaded — it never leaves your device.

Financial readiness calculator

Reads your bank statement locally and tells you exactly where the gaps are.

Funded-opportunities directory

A vetted list of real scholarships and grants, for applicants who need one.

100% free, no account, no ads

The trust the whole product is built on — nothing to sign up for, nothing to hide.

Five steps, entirely in the applicant's browser

Real usage. Real iteration.

Real usage — and a clear next test

Grew to just over 1,000 visits on word-of-mouth alone, then plateaued — reaccelerating that curve through paid partnerships is exactly what this raise funds.

Built from real field feedback

South Africa support and a passport-expiry fix both shipped directly from applicants' real reports.

Engineering discipline from day one

A full automated test suite guards every release before it ships — not a prototype held together by hand.

“She is still having issues.”

A real bug report, from a real applicant's passport scan — acted on and shipped within days. This is the loop the product runs on: an applicant hits a wall, we find out, we fix it, everyone after her benefits.

— direct WhatsApp support channel, live in the product

Applicants never pay — that's the moat

B2B licensing

Subscription seats sold to travel agencies and licensed immigration consultancies who use Smooth Application as their own client-intake tool.

PRIMARY — RECURRING

Verified referral fees

A flat, paid-per-lead fee when we connect an applicant to an OISC- or CICC-verified licensed adviser — paid at introduction, not shared on an ongoing basis.

SECONDARY — ONE-TIME

Travel-adjacent commerce

Affiliate commission on travel insurance, flights and remittance — things applicants are already buying for their application.

SUPPLEMENTARY

Distribution through the industry, not against it

NANTA-registered travel agencies

4,000+ member agencies nationwide — the direct channel for B2B licensing outreach.

Official licensing registers only

OISC (UK) and CICC (Canada) public registers, so every referral partner is independently verifiable, never an informal “agent.”

Organic, WhatsApp-led growth

Word of mouth is already driving real usage today — the product's WhatsApp support line is the same channel applicants already trust.

Compliant by design — not racing to the line others cross

Informal “agents”

Unregistered, unverifiable

Give case-specific advice with no license

Real legal exposure — for them and their clients

No consistent quality or accountability

Smooth Application

Free document prep — never case advice

Refers only to OISC / CICC-verified professionals

Nothing uploaded — privacy is architectural

The safer platform to trust and to partner with

Closest adjacent tool we've found: VisaOS, a general-purpose checklist/evidence-map product — not built for Nigerian applicants specifically, and not free. Nothing we've found combines free access, this country-specific depth, and a Nigeria-first support channel.

We looked for the holes ourselves

Unlicensed immigration advice

Never diagnose or advise on a case ourselves — refer only to verified OISC / CICC professionals.

Marketplace disintermediation (the “Uber problem”)

Paid per lead at introduction, not a revenue share — and B2B subscriptions as the core recurring line, which has no relationship to leak.

OCR / scan accuracy

Manual-entry fallback on every scanned field, and every real failure ships as a fix within days.

TEAM

Two co-founders, four ventures built together before this one

Seyi Afeni

Founder

Academia platform Free study materials for university students — 10,000+ downloads

Safevisuals Published The Visuals, a highly visual textbook for secondary school students

Kipnest Airbnb-style accommodation platform for lawyers attending Bar conferences

Crisp Laundry Solution Software for laundry businesses — 100 users

Sope Tubi

Co-Founder & CTO

Academia platform Co-founded and engineered the platform behind the 10,000+ downloads

Safevisuals Co-founded; led engineering behind The Visuals

Kipnest Co-founded the Bar-conference accommodation platform

Crisp Laundry Solution Co-founded; built the laundry-business software, 100 users

Fourth venture together, not the first. Same founding pair has shipped and gotten real users on three prior products — this team ships.

Raising to prove the model, not just the product

Raising: \$40,000

Runway: 12 months · Structure: SAFE (recommended for this stage)

	First hire A partnerships/compliance operator (or engineer) — removes single-founder key-person risk.	\$15,000–\$25,000
	Legal & compliance An actual immigration-law opinion on OISC/CICC boundaries, plus Privacy Policy sign-off before sign-in ships.	\$3,000–\$5,000
	Partnerships & outreach In-person outreach to NANTA agencies and licensed advisers — closing the first real pilot.	\$4,000–\$6,000
	Product & infrastructure Supabase/Vercel costs for cross-device accounts, plus a fallback paid OCR path for hard scans.	\$6,000–\$8,000
	Paid acquisition test A measured budget to test reaccelerating the traffic curve shown on the Traction slide.	\$5,000–\$8,000

Excludes founder living costs — sized separately and added to the total before presenting.

A deliberately modest, assumption-driven ramp

Revenue stream	Q1	Q2	Q3	Q4	12-mo total
B2B licensing	\$0	\$300	\$1,180	\$2,500	\$3,980
Referral fees	\$0	\$180	\$740	\$1,580	\$2,500
Affiliate commerce	\$0	\$0	\$60	\$240	\$300
Total	\$0	\$480	\$1,980	\$4,320	\$6,780

Assumptions: \$49/mo per B2B seat (illustrative — to validate), a \$15 flat referral fee per introduction, and roughly \$4 average affiliate commission per conversion. Q1 is deliberately \$0 — that quarter funds the legal review, first hire and outreach, before any pilot closes. The ramp reaches 22 B2B seats, ~45 referrals/month and ~30 affiliate conversions/month by month 12.

The point of year one isn't revenue — it's proving these three price points hold up with real partners, so a seed round can scale distribution with confidence.

Every applicant deserves a clear, honest shot at approval.

Free forever for applicants. Built on trust that doesn't have to be taken on faith.
